

New Compliance Check Feature

The [Compliance Check](#) module has been enhanced.

A new Parameter (LRN 035/253) has been created, which holds the number of days where no compliance check shall be started.

This is calculated "Today plus number of days".

The Compliance Check programs evaluate the parameter. When an address is entered in operations, the programs check the date of last check in address maintenance and calculate whether the address needs to be checked again.
